

## **Hedgerow**

### **Description**

Small trees, shrubs, and grasses planted along the edges of farm fields or along roads to filter runoff and act as a living fence and wildlife corridor. Hedgerows are planted on land in production agriculture where air and water quality is impaired or where there is a high potential of water quality impairment.

### **Benefits**

- Protects water quality.
- Provides shelter for wildlife.
- Improves aesthetic value.
- Improves air quality.
- Reduces noise.
